

ENVIRONMENTAL PRODUCT DECLARATION

CQUEST™ GB

MODULAR CARPET TILE

CQuest™ GB

An alternate version of our GlasBac™ backing. It features the same superior performance with a composition of post-consumer carpet tiles, bio-based additives, and pre-consumer recycled materials, which are net carbon negative.

Interface®

For more than four decades, Interface has consistently led the industry through design and innovation and is a world leader in environmental sustainability. We are committed to transparency and will continue to share our progress as we work to become a carbon negative company by 2040.

At Interface we believe Life Cycle Assessment is critical for evaluating the environmental impact of our products. The LCA-based Environmental Product Declaration is the best way to provide full disclosure of those impacts to our customers.

Interface was one of the first companies to develop EPDs for all of our products manufactured globally, and we are committed to providing this level of transparency to our customers, partners and the industry.

GENERAL PROGRAM INSTRUCTIONS AND VERSION NUMBER	UL Solutions Program Operator Rules v.2.7 2022
MANUFACTURER NAME AND ADDRESS	Interface, Inc.; Troup County, Georgia, USA
DECLARATION NUMBER	4791540199.104.2
DECLARED PRODUCT & FUNCTIONAL UNIT OR DECLARED UNIT	Interface modular carpet tile, one square meter floor covering
REFERENCE PCR AND VERSION NUMBER	Part A: Life Cycle Assessment Calculation Rules and Report Requirements, (UL Environment, V4.0, 2022) and Part B: Flooring EPD Requirements (UL Environment V2.0, 2018)
DESCRIPTION OF PRODUCT APPLICATION/USE	Interface's CQuest™ GB Modular Carpet with an alternate version of our GlasBac™ backing. It features the same superior performance with a composition of post-consumer carpet based additives, and pre-consumer recycled materials.
PRODUCT RSL DESCRIPTION (IF APPL.)	15 years
MARKETS OF APPLICABILITY	Americas
DATE OF ISSUE	September 15 th 2025
PERIOD OF VALIDITY	5 Years
EPD TYPE	Product-specific
EPD SCOPE	Cradle-to-grave
YEAR(S) OF REPORTED PRIMARY DATA	2024
LCA SOFTWARE & VERSION NUMBER	LCA For Experts 10.9.1.10
LCI DATABASE(S) & VERSION NUMBER	LCA For Experts 10.9.1.10
LCIA METHODOLOGY & VERSION NUMBER	TRACI 2.2/CML 4.2/EF 3.1
The PCR review was conducted by:	UL Solutions
	PCR Review Panel
	epd@ul.com
This declaration was independently verified in accordance with ISO 14025: 2006. ☐ INTERNAL ☒ EXTERNAL	Cooper McCollum, UL Solutions
This life cycle assessment was conducted in accordance with ISO 14044 and the reference PCR by:	Interface Inc.
This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:	Salil Arora, Populus Group

LIMITATIONS

Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

Accuracy of Results: EPDs regularly rely on estimations of impacts; the level of accuracy in estimation of effect differs for any particular product line and reported impact.

Comparability: EPDs from different programs may not be comparable. Full conformance with a PCR allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible. Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

1. Product Definition and Information

1.1. Description of Company/Organization

Interface, Inc. is a global flooring solutions company and sustainability leader, offering an integrated portfolio of carpet tile and resilient flooring products that includes Interface® carpet tile and LVT, nora® rubber flooring, and FLOR® premium area rugs for commercial and residential spaces. Made with purpose and without compromise, Interface flooring brings more sophisticated design, more performance, more innovation, and more climate progress to interior spaces. A decades-long pioneer in sustainability, Interface remains “all in” on becoming a restorative business. Today, the company is focusing on carbon reductions, not offsets, as it works toward achieving its verified science-based targets by 2030 and its goal to become a carbon negative enterprise by 2040.

1.2. Product Description

Product Identification

Figure 1. Product Structure

Interface carpet tiles constructed with CQuest™ GB feature an alternate version of our GlasBac™ backing. With the same superior performance with a composition of post-consumer carpet tiles, bio-based additives, and pre-consumer recycled materials, the backing is net carbon negative GWP for cradle to gate impacts. The entire carpet tile’s GWP for cradle to gate impacts is 2.74 kg CO_{2eq}/m².

This Environmental Product Declaration covers all styles and patterns of modular carpet on CQuest™ GB backing with recycled Nylon yarn. The product is manufactured in Troup County, Georgia, USA. The products range in yarn weight from 373 to 1424 grams per square meter. A medium yarn weight of 678 grams per square meter is reported, and the Global Warming Potential of all additional product yarn weights are reported in Table 13.

Product Specification

UNSPSC code: 30161700
CSI code: 096800

Flow Diagram

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

1.3. Application

Application of product is intended for modular installation of floorcovering in commercial buildings.

1.4. Declaration of Methodological Framework

The data is retrieved from a cradle to grave LCA study. The description of study boundaries is declared in Table 6.

As dictated by the Part A: Calculation rules for the life cycle assessment and requirements, the cut-off criteria is less than 1% for energy use and less than 1% of total mass per unit process, the sum of which shall not exceed 5% of either energy or mass. If a flow met the cut-off criteria for exclusion, yet was thought to have significant environmental impact, then it was included.

Where relevant, the background data incorporates some allocation such as in the power mix. There are no co-products produced in the process, so the LCA model does not include allocation. No credits were taken for recycling of production waste.

As required by UL Part A, a default reference service life and estimated service life value of 75 years were considered.

1.5. Technical Requirements

NAME	VALUE	UNIT
Yarn type	Nylon	
Primary backing type	Polyester	
Secondary backing type	CQuest™ GB (recycled vinyl)	
CRI rating	3.5	2.5 Moderate, 3.0 Heavy, 3.5 Severe
Total thickness	Variable	mm
Product weight*	3338	g/m ²
Surface pile thickness*	2.7	mm
Surface pile weight	678	g/m ²

*nominal vaues

1.6. Market Placement

Product considered relevant technical specifications such as ASTM E-648 ad ASTM-662. See Section 6.3 for more information.

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

1.7. Material Composition

Component	Material	% Mass*
Yarn	Nylon	2%
	post-consumer recycled nylon	9%
	pre-consumer recycled nylon	10%
Primary Backing	pre- & post-consumer recycled polyester	3%
Precoat Backing	Vinyl acetate emulsion	5%
	Alumina trihydrate	3%
Stabilization Layer	Fiberglass mat	1%
Secondary Backing	ReEntry Carpet Scrap	10%
	Recycled PVC Resin	8%
	Bio-based plasticizer	8%
	Pre-consumer recycled limestone	40%

*nominal values

1.8. Manufacturing

CQuest™ GB is manufactured in Troup County, Georgia, USA. The product is produced through tufting recycled nylon yarn into a primary fleece then adhering the yarn and nonwoven fleece to a backing for added dimensional stability and modularity. The product is then cut into tiles and packaged, with a production waste factor of 2.7%.

1.9. Packaging

Planks and tiles are packaged in cardboard boxes. Packaging waste should be reused or sent local cardboard recycling facilities. In the absence of primary data, national average data is used to model packaging waste.

1.10. Transportation

Delivery is represented as transport by truck over a distance of 500 miles (805 km).

1.11. Product Installation

Product may be installed with Interface TacTiles or pressure sensitive adhesive. For full instructions see the [Interface Installation Guide](#). Installation waste is minimized due to the modular design of the carpet. On average, 2% of the total installation goes to waste.

1.12. Use

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

Conditions for Use: During the reference service life of the carpet, it should be cleaned in accordance with the product warranty instructions including vacuuming and extraction cleaning. The frequency is dependent upon the expected foot traffic and local conditions. See the [Interface Maintenance Guide](#) for more details.

1.13. Reference Service Life and Estimated Building Service Life

Reference Service Life is 15 years as indicated in Table 3. Building estimated service life is 75 years as indicated in Table 4.

1.14. Reuse, Recycling, and Energy Recovery

The modular aspect of the product allows for easy reuse of the product. The product is intended to be recycled through [Interface's ReEntry process](#).

1.15. Disposal

At end of life, the product should be returned to Interface through Interface's ReEntry process. ReEntry allows us to reclaim the products we've created and use them as raw materials for new ones. More information can be found in Interface's [ReEntry Guidelines](#) or by contacting Interface at 1.888.733.6873 or via email at reentry@interface.com.

2. Life Cycle Assessment Background Information

2.1. Functional or Declared Unit

The functional unit is one square meter of floorcovering.

MODULAR CARPET ON CQUEST™ GB	VALUE	UNIT
Functional unit	1	m ²
Mass*	3.34	kg

*nominal value

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

2.2. System Boundary

The LCA is for one square meter of flooring. While the warranted service life is 15 years, modules B1, B3, B4, and B5 are not declared, so the maintenance (B2) is represented for one year. The system boundaries include:

- **A1** Raw material extraction and processing, and processing of recycled materials
- **A2** Transport to the factory
- **A3** Manufacturing including materials, packaging, energy, and waste disposal or recycling
- **A4** Transport to installation sites (US)
- **A5** Installation including ancillary materials required for installation and trim-waste disposal
- **B2** Maintenance: Includes the energy for vacuuming, extraction cleaning and the production and of cleaning agents. The treatment of the waste-water from extraction cleaning is included. This is for one year of use.
- **C2** Transport of waste to local disposal
- **C4** Disposal

2.3. Product for Use Phase (Modules B1-B7)

A kind of “average” cleaning scenario is assumed following the recommendations of the manufacturer. The “average” scenario is declared for the product. Maintenance for modular carpet tile includes daily vacuuming and biweekly wet extraction cleaning for best results. In the LCA study we are assuming all customers are located in the US, and therefore only consider impacts from US electricity.

2.4. Estimates and Assumptions

The datasets for materials upstream from manufacturing are a combination of information from the Sphera database and supplier provided datasets. Inventories for all materials are not available and when unavailable, conservative proxy datasets were chosen based on similarity of material.

Global averages for fuel and transportation datasets were used in place of U.S.-specific datasets. Fuel and transportation comprise minimal impacts within the products and changing the datasets to location-specific would have an immaterial change in the results (<2%).

In this study, we are assuming all customers are based in the US and therefore, would only consider US power impacts.

2.5. Units

SI units are used for all LCA results.

2.6. Data Sources

The datasets for materials upstream from manufacturing are a combination of information from the Sphera 2025.1 MLC database version 10.9.1.10 and supplier provided datasets.

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

2.7. Data Quality

The data quality ranges from good to very good. The temporal quality of the data is very good with both the manufacturing specific data and the LCA FE background data being from 2024.

2.8. Period under Review

The data collection and the product described are a product manufactured in 2024.

2.9. Allocation

Where relevant, the background data incorporates some allocation such as in the power mix. There are no co-products produced in the process, so the LCA model does not include allocation. No credits were taken for recycling of production waste.

3. Life Cycle Assessment Scenarios

Table 1. Transport to the building site (A4)

NAME	VALUE	UNIT
Fuel type	Diesel	
Liters of fuel	0.0252	l/100km
Vehicle type	Truck 34-40	
Transport distance	805	km
Capacity utilization (including empty runs, mass based	85	%
Weight of products transported*	3.3	kg
Volume of products transported*	0.001	m³
Capacity utilization volume factor (factor: =1 or <1 or ≥ 1 for compressed or nested packaging products)	1	-

5. LCA Interpretation

The life cycle impacts of modular carpets are driven by the Product Stage and the impacts from this stage are driven by raw materials. Yarn and backing materials are the major contributors to impacts. Recycled polymers in both yarns and backings greatly reduce the impacts as compared to virgin petrochemical based materials previously used in Interface carpet manufacture.

TRACI 2.2	A1-A3	A4	A5	B2	C2	C4
GWP-total [kg CO2 eq.]	72%	8%	6%	11%	0%	3%
GWP-fossil [kg CO2 eq.]	78%	7%	5%	8%	0%	2%
GWP-biogenic [kg CO2 eq.]	97%	1%	2%	0%	0%	0%
GWP-LUC [kg CO2 eq.]	74%	20%	2%	2%	0%	2%
AP [kg SO2 eq.]	84%	7%	3%	3%	0%	2%
EP [kg N eq.]	81%	12%	2%	3%	0%	2%
ODP [kg CFC 11 eq.]	93%	0%	2%	5%	0%	0%
ADP [MJ, LHV]	77%	6%	9%	5%	0%	2%
SFP [kg O3 eq.]	83%	9%	3%	3%	0%	2%

6. Additional Environmental Information

6.1. Environment and Health During Manufacturing

More information on product stewardship can be found on [Interface's sustainability website](#).

6.2. Environment and Health During Installation

All recommendations shall be utilized as indicated by the installation guidelines. For full instructions see the [Interface Installation Guide](#).

Interface®

CQuest™ GB
Modular Carpet Tile

According to ISO 14025,
EN 15804 and ISO 21930:2017

6.3. Extraordinary Effects

Fire

NAME	VALUE
Radiant panel (ASTM E-648)	Class 1
Smoke density (ASTM E-662)	< 450

Water

The product’s backing is impervious to water, protecting the subfloor from leaks and spills. Exposure to flooding for long periods may result in damage to the product.

Mechanical Destruction

The product is intended for commercial applications with heavy wear (CRI Test method 101 Appearance Retention Rating). Performance requires proper installation according to Interface installation guidelines.

6.4. Environmental Activities and Certifications

All environmental activities and certifications can be found on [Interface’s sustainability website](#).

6.5. Further Information

For more information on the CQUEST™ backings visit [Interface’s website](#).
